

GREX

THE 2009 COLLECTION

The J2 model has been added to the Grex 2009 collection. It is a new jet helmet that will gain the approval of the urban motorcyclists. The rest of the range has been updated, especially in its graphics: they are now even fresher and more original to meet the taste of young people. Top models of the Grex range are still: the full-face flip-up model RF2, the full-face road R2, the demi-jet DJ1 proposed in versions with or without peak, and the K1 VISOR, the demi-jet for young riders. As always, the Grex range combines quality and reasonable pricing. These are a real "must-have" of the third brand of the Nolangroup, whose target wants a design product, with technical background, but at a reasonable price.

All the Grex collection products are made with Lexan® polycarbonate and the shell has a transparent protective finish that maintains the colour's brilliance and shine.

The inner shell is made of EPS and moulded with differentiated densities. All the inside elements are made of "Air Comfort" fabric with Sanitized® treatment that ensures hygiene and freshness over time.

NEW

NEW

J2

The latest product in the Grex range is an elegant jet, with appealing design and strong details. The extra-long visor is scratch-resistant, and has an UV protection up to 400 nanometers. The useful internal sun screen can be easily activated thanks to an ergonomic external control. The ventilation system, consisting of an upper air intake and rear extractors, ensures constant air recirculation and optimum comfort. The ADJUSTABLE BUCKLE retention system has a micrometric regulation system, and the inner padding, made of Air Comfort fabric, is removable and washable. **J2 is available in the CLUB and ONE versions. Available colours: Flat Black, Metal White, Metal Silver, Metal Grey, Metal Black, Anthracite and Black Graphite for the CLUB version; Black for the ONE version.**

RF2

This is the modular helmet from the Grex line. This model has been renewed compared with previous versions and meets the needs of consumers who demand a practical and versatile product.

An important technical feature is the extremely useful inner sun visor which means it can be used in any situation, in long trips out of town and in brief runs across town. The visor is also ready for the Fog Resistant system which improves resistance to fogging. The shell, featuring an attractive modern design, is fitted with a chin guard with an opening mechanism known as “Dual Control Lift”. This special system, practical and easy

to operate, is positioned in the middle and allows you to open the chin guard with one hand only. Furthermore, it prevents accidental closure thanks to the lock of the opening key.

The front ventilation system and the air intakes on the chin guard permit adequate air recycling, preventing the formation of condensate and consequent fogging of the visor.

The retention system is of the micrometric regulation type and the removable and washable internal padding is made of “Air Comfort” fabric that ensures correct breathability.

It is proposed in the CLUB and ONE segments.

Colourings available: Flat Black, Metal Silver, Metal Grey, Anthracite and Black Graphite for the CLUB version; only Black for the ONE version.

R2

A full-face road helmet with an aggressive and streamlined design. Perfect for those who love track trials and the look of a real rider. The quick release visor is scratch-resistant and with protection from UV rays up to 400 nanometres. Ventilation is guaranteed by two air intakes positioned at the front and on the chin guard. The inner "Air Comfort" padding is removable and washable for the PIN-UP, TRAP and CLUB versions. The retention system can be adjusted micrometrically.

Seven versions are available:

PIN-UP, TRAP, TOTEM, SHAMAN, DECOR, CLUB and ONE. Gold, Red and Blue on a Metal Black base. Gold on a Flat Black base. Red and Blue on a Metal White base for the PIN-UP version. Pink, Brown and Blue on a Flat Black base for the TRAP version. White and Anthracite on a Flat Black base for the TOTEM segment. Pink, Blue, Black, Red on a White base for the SHAMAN version. Red, Blue, Anthracite and Yellow on a Black base for the DECOR segment. Flat Black, Metal Silver, Metal Grey, Metal Black, Anthracite and Black Graphite for the CLUB version. White and Black for the ONE segment.

DJ1 VISOR

This is the demi-jet of the Grex range. Thanks to the two different outer shell sizes (XXS/M, L/XXL) the helmet dimensions are always proportioned to the rider's size.

The broad visor provides excellent shelter from air and solar rays and may be easily disassembled for normal cleaning and maintenance operations. The liners – of the “Air Comfort” type – are removable and washable.

The attractive graphics of the FANCY and ARTWORK version make it particularly suitable for a female and fashion-conscious public which loves the scooter for coping with city traffic.

The CLUB version is proposed in Metal Black, Black Graphite, Flat Black, Metal Silver, Metal Grey, Azure e Pink colours, while the ONE version is only available in Black and White. Flat Black, Azure e Pink for the new LOLLIPOP graphic.

DJ1 PEAK

The same features as the DJ1 VISOR can be found here but it differs from it as there is no visor which is replaced by a simple peak.

Two segments are proposed: CLUB and ONE. Metal Silver and Flat Black colours for the CLUB version, Black and White for the ONE version.

K1 VISOR

A demi-jet with a convex shell, this is the ideal helmet for all children. Its design has been studied carefully following the particular cranial shape of the little ones. This means that even baby-bikers can savour their first trips on two wheels with mum and dad in complete safety. The scratch-resistant visor and the retention system with micrometric adjustment make it even more complete.

It is available in the FANCY and TEENS graphics that are lively and amusing.
